RESEARCH CONTRIBUTIONS OF EARLY CAREER INVESTIGATORS in the Sciences of Mind, Brain, and Behavior

Through its *Early Career Impact Awards*, FABBS recognizes scientists who are in the early stages (first 10 years post-PhD) of their professional careers and have shown promise as a leading researcher. In their brief careers, these investigators have made noteworthy contributions to the sciences of mind, brain, and behavior and have also worked to share their research with the public through outreach in their communities, blogs, or social media. Through flash presentations, the scientists will describe their research, why it's important, and how federal support has been instrumental in their research careers so far.

A CONGRESSIONAL BRIEFING

Tuesday, November 7, 2017

12:00 Noon – 1:00 p.m.

Rayburn House Office Building

Room 2044 (Basement Level)
