

**Statement of Juliane Baron, Executive Director  
Federation of Associations in Behavioral and Brain Sciences**

**Fiscal Year 2022 Appropriations for the National Science Foundation**

**submitted for the record to the**

**United States Senate Committee on Appropriations  
Subcommittee on Commerce, Justice, Science, and Related Agencies**

**Honorable Jeanne Shaheen, Chairwoman  
Honorable Jerry Moran, Ranking Member**

**June 23, 2021**

Chairwoman Shaheen, Ranking Member Moran, and Members of the Subcommittee:

The Federation of Associations in Behavioral and Brain Sciences (FABBS) is grateful for the opportunity to submit testimony for the record in support of the National Science Foundation (NSF) budget for fiscal year (FY) 2022. FABBS represents twenty-seven scientific societies and over sixty university departments whose members and faculty share a commitment to advancing knowledge of the mind, brain, and behavior. As a leading member of the Coalition for National Science Funding, **FABBS joins the broader scientific community in urging Congress to fund NSF with at least \$10 billion in FY 2022.**

FABBS is grateful for the strong bipartisan and bicameral support to re-invigorate federal research and development at a time when our global competitors are looking to surpass American investments. The bipartisan United States Innovation and Competition Act recently passed by the Senate would authorize more than \$80 billion for the Foundation over five years. This same commitment to growing NSF is reflected by Members of the House Science, Space, and Technology Committee in the bipartisan NSF for the Future Act recently passed out of committee, which would authorize \$78 billion over five years. Furthermore, the President's budget request calls for over \$10 billion in fiscal year 2022, a 20 percent increase over FY21 appropriations.

This demonstration of support recognizes that NSF-funded research pays long-term dividends in health, national security, and the innovation and technologies driving our economy. In addition, NSF research and programs provide the tools to develop a workforce equipped for the challenges and technologies of the future and foster the next generation of scientists - with a commitment to broad participation – whose work will keep this country at the forefront of discovery. Furthermore, federal support for the NSF is vital to our research infrastructure. NSF supports one out of every four basic research projects at higher learning institutions across the United States.

Despite the critical importance of NSF, and the fact that the U.S. has lost standing in international competitiveness, the agency remains woefully underfunded. Due to budget constraints, NSF must decline thousands of qualified proposals, of which nearly \$3 Billion dollars' worth are rated very good or higher. NSF Director Panchanathan has indicated that proposals that do receive funding

could produce better research outcomes and provide better value by increasing the size and duration of grants. In fact, he has said that NSF could double their budget on the current research and researchers that go unfunded, and “a quadrupling of the funding is just barely enough to be able to take us to all the ideas being unleashed so that we might be far ahead of the competition.”

FABBS members are grateful that NSF received \$75 million in the CARES Act and \$600 million in the American Rescue Plan. These appropriations have already led to important insights related to the COVID-19 pandemic, while helping to alleviate the research interruptions caused by the public health crisis and fund timely research critical to helping our country slow the spread of COVID-19. NSF has made more than 1,000 awards to address questions related to the pandemic and its long-term consequences.

Behavioral, cognitive, and social scientists are producing tools for policymakers, educators, and the general public to cope with and recover from the unprecedented circumstances of the past year. They are developing strategies to get students back on track, delineating best practices for public health communication, and advancing knowledge to foster resilience in the face of collective trauma and sustained periods of stress. Robust investment in basic science in FY22 is vital to accelerating the pandemic recovery and maintaining American leadership in research and development.

FABBS scientists have a particular interest in the Social, Behavioral and Economics (SBE) Sciences directorate, which provides an estimated 62 percent of the federal funding for fundamental research in SBE sciences at academic institutions across the country.<sup>1</sup> Thus, our fields are heavily dependent on the NSF to inform discoveries from expanding our understanding of the mechanisms of memory underlying brain activity, to contributing to the design and assessing the social and ethical consequences of new technologies, to better understanding decision making and risk assessment with broad implications for health and public policy. SBE is home to the National Center for Science and Engineering Statistics (NCSES), a federal statistical agency that provides statistical information about the United States’ science and engineering (S&E) enterprise. NCSES collects, analyzes, and disseminates data on research and development (R&D), the S&E workforce, the condition and progress of science, STEM education, and U.S. competitiveness in science, engineering, and technology R&D.

In addition to receiving support from SBE, FABBS members appreciate critical funding from the Computer and Information Science and Engineering Directorate (CISE), which funds research on topics such as human-technology interaction and cyber-assisted learning; the Biological Sciences (BIO) Directorate, which funds research on topics such as sleep and circadian rhythms and sex differences in responses to stress; and the Education and Human Resources (EHR) Directorate, which funds research on increasing America’s human capital through effective education in science, technology, engineering and mathematics.

We recognize that Congress must balance competing budget priorities while working to deliver a robust recovery from the pandemic. To that end, increasing federal investment in fundamental scientific research across all sciences is critical to successfully managing the pandemic recovery

and ensuring the future prosperity, security, and health of our nation and its people. **We urge you to provide NSF with at least \$10 billion for FY 2022.** Along with the broader scientific community, we believe that increased funding for fundamental scientific research would set the NSF on a path to yield transformative benefits to the country. We thank you in advance for your commitment to robust funding in FY 2022 and efforts to complete the budget in a timely manner.

Thank you for considering this request.

Juliane Baron  
FABBS Executive Director
